

TreeLEDXB

High Intensity LED Festoon Lighting

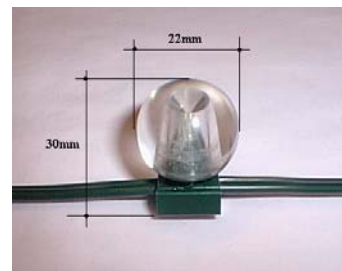

High Brightness - **WIDE** Angle

Now also available in *Warm White*

The **TreeLEDXB** system utilises LEDs with specially designed high intensity 'chips' within each device. These produce *three times* the brightness of LEDs currently used in similar applications. The source of the light is also larger, therefore providing a wider viewing angle which is a crucial feature in LED festoon lighting. A 22mm diameter polycarbonate lens provides excellent optical performance and protection for the LEDs. Rubber cable ensures a flexible yet rugged system which is ideal for long term outdoor use in all weather conditions.

Specifications :

Light source :	High Power LEDs
Colours :	White, Warm white, Red, Green, Blue, Amber.
Housing :	Polycarbonate Solid Lens Cover - (IP65)
Harness Details :	50 Modules @ 250/500mm with 5m lead
Power consumption :	12 watts per Festoon Harness
Rated Life :	50,000 + hours
Supply Voltage :	12 volts DC (nominal)
Power supply :	12v DC Switch Mode or DC-DC Converter
